web clicks, downloads, and attachments without a reported compromise.

Cybersecurity threats are more sophisticated than ever and evolving at breakneck speeds. So, for businesses in the hybrid world, the need for endpoint security that's one step ahead of cybercriminals has never been greater.

HP Wolf Security for businesses offers a buffer zone that's underpinned by multi-layered security below, in, and above the OS. Featuring self-healing firmware, in-memory breach detection, and threat containment via isolation, HP Wolf Security is protection businesses can depend on.

## Explore some of the key features of HP Wolf Security:

# 1

### Simpler, cost-effective security

HP Wolf Security for business offers cloud-based control in a centralised management dashboard for every PC in the estate. Plus, it lowers costs with there being far fewer high-priority tickets and time spent on remediation.

# 2

### Robust, dependable protection

Credential protection prevents users' sensitive login information from being entered on fake websites. While for malware, there's no escaping threat containment thanks to CPU-enforced isolation. And for the next generation of threats, AI-powered antivirus keeps PCs one step ahead.

# 3

### Safe, productive employees

With HP Wolf Security for business, employees can work in confidence without the worry of infecting the organisation. Automatic phishing protection removes any burden of responsibility from the employee so they can work securely at home, in the office, or on the road.

## HP Wolf Security

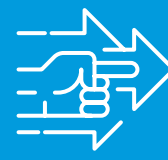

### HP Wolf Security for Business

All the hardware-enforced security capabilities as standard on HP business PCs.

### HP Wolf Pro Security

Additional levels of security software and services tailored for SMBs.

### HP Wolf Enterprise Security

Additional security solutions for enterprise and government customers.

## Frequently asked questions

### Is HP Wolf Security always on?

Yes, hardware-enforced protection remains active in identifying and containing threats at every moment.

### Is HP Wolf Security ready to go?

The hardware-based security comes as standard while the Pro Security Edition offers pre-optimised protection for SMBs when shipped.

### Which HP platforms can use the Pro Edition?

Currently, the Pro Edition is supported on select HP notebooks and desktops with Intel® i3, i5, i7, and AMD Ryzen processors with a minimum of 8GB of memory.

### Can I upgrade to managed security?

This is all possible as soon as your business grows to a size where managed security is required.
